BARR'S

DAFFODILS

AND BEAUTIFUL "ENGLISH AMATEUR" TULIPS.

BARR'S DAFFODILS were Awarded the only GOLD MEDAL at the Second Great Daffodil Conference, 1890.

THE HOME OF NARCISSUS CYCLAMINEUS.

This unique Daffodil was found wild in its largest development in wet meadows. Rev. Dr. Watson, Largs, has flowered it annually since its introduction; Rev. H. Ewbank, Isle of Wight, grew it two or three years on rockwork, and three or four years in the flower border; Mr. G. H. Cammell, Hathersage, has it happy at the foot of a rockwork, and still more flourishing naturalized in grass, where it is freely increasing; at Kew, Mr. Dewar reported successful culture. Dr. Foster, of Cambridge, has grown it in his garden (subsoil of chalk) since 1889, and each year it has improved, and is now increasing. Mr. F. W. Burbidge has grown it successfully since 1886 in pots, frames, out-doors against a warm house, and latterly bloomed it in the grass in a damp meadow. Mr. C. J. Backhouse, of Weardale, grows it successfully all over his garden, but on rockwork the flowers are largest. Mr. Osgood H. Mackenzie, of Poolewe, has it growing freely and increasing on the exposed top of a rockery. Mr. T. H. Burroughes, Stamford, has, since 1887, grown successfully Corbularia Citrina in milk pans sunk in the ground, filled with peat and kept constantly wet; we have tried this mode of culture on a large scale successfully.

BARR & SON.

12 KING STREET, COVENT GARDEN, LONDON.

Nurseries—LONG DITTON, SURREY. A few minutes from Surbiton Station (S.W.R.) Visitors invited to the Nurseries during Spring, Summer, and Autumn, to see the Grand Collections of DAFFODLS, IRISES, PÆONIES, PERENNIAL SUNFLOWERS, MICHAELMAS DAISIES, and other HARDY HERBACEOUS and BULBOUS PLANTS.

PRIZES for DAFFODILS, SILVER CUP & MEDALS for 1895, and BARR'S PRIZE MEDALS for TULIPS, see under Special Notices.

SPECIAL NOTICES.

- I. Quality.—All bulbs and plants are carefully selected.
- II. Experimental Grounds at our Nurseries, Long Ditton, a few minutes from Surbiton Station, S.W.R. (close to the Surbiton New Recreation Grounds).—Visitors at all seasons will find many things of interest and beauty in Hardy Bulbs, Tubers, and Hardy Herbaceous Perennial Plants. In spring the brilliancy of our new Daffodils, Chionodoxas, Anemones, Tulips, etc., surpasses description. Visitors invited to enjoy the floral treat.
- III. Parcel Post.—We shall in all cases use the Parcel Post when cheapest and the articles ordered weigh under eleven pounds, and admit of being packed for safe transmission by "Parcel Post."
- IV. Carriage by Rail may be deducted at settlement of account on orders for Bulbs to any Railway Station in Great Britain, and to all ports on the Irish Coast.
- V. Orders, paid in advance.—Carriage, in all such cases, will be prepaid.
- VI. Returned Empties.—A small charge is made for packages, but if returned within a fortnight, allowance is made for the same. Returned empties should have the sender's name on the address label for identifica-tion, and a notification should be sent by post, stating date of dispatch and name of Railway Company.
- VII. Fruit and Forest Trees, Shrubs, Plants in pots, Soils, Watson's Lawn Sand, Manures, Anti-Blight and Insecticides—on these we do not allow carriage.
- VIII. Five per cent, may be deducted from accounts if paid within one month from date of invoice.
- IX. Money Orders and Postal Orders to be made payable at Covent Garden Post Office; these and all cheques should be crossed "London and County Bank." Small amounts may be remitted in Postage Stamps or Coin, in a Registered Letter.
 - X. ** Naming Daffodils.-Cut specimens of Daffodils we undertake to name correctly, at the charge of 6d. cach, 2s. 6d, per dozen, 15s. per 100, to cover attendant expenses. Address all cut specimens to be named, accompanied by a remittance, to our Nursery, Long Ditton, Kingston-on-Thames, Surrey.
- XI. Cut Daffodil Flowers.—When in bloom out-of-doors, cut specimens of Daffodils, correctly named, we forward post-paid at a moderate charge, to cover attendant expenses, thus offering a good opportunity to those who wish to extend their knowledge of these lovely flowers of spring. If a list of the varieties possessed by the sender is enclosed, such sorts will be omitted. A remittance should accompany the order.
 - 12 Cut Daffodil flowers in 12 varieties..... 2/6 | 30 Cut Daffodil flowers in 30 varieties..... 6/6 ,, in 30 6/-..... 3/6 36 18 in 12 ,, 90 ,, in 18 12/6 in 18 in 50 150 Cut Daffodil flowers (without names) in variety, for decoration, 5/6, 7/6 & 10/6 per 100.
- XII. Daffodil Illustrations and Coloured Plates can be had, post-free, at following charges—
 - No. 1. Two large uncoloured Illustrations—one representing a Group of Yellow Trumpet Daffodils, and the other a Group of White Trumpet Daffodils—drawn and arranged for the "Gardeners' Chronicle" by Agnes Barr. The two Plates for 1s. 6d.
 No. 2. Beautiful Coloured Plate of a Group of White Trumpet Daffodils. 1s.
 No. 3. Beautiful Coloured Plate of Daffodils, representing Incomparabilis Gloria Mundi, Incomparabilis Princess Mary, and Leedsii Beatrice. 1s.
 No. 4. Beautiful Coloured Plate of Daffodil Bicolor Horsfieldii. 1s.
 No. 5. Beautiful Coloured Plate of Daffodils, representing Cyclamineus (the Cyclamen-flowered Daffodil) and Triandrus albus (Angel's Tears Daffodil). 1s.
 No. 6. Beautiful Coloured Plate of Daffodils, representing a Group of Poeticus and Burbidgei varieties. 1s.
 No. 7. Beautiful Coloured Plate of a Group of Daffodils, including Cernuus pulcher, Johnstoni Queen of Spain, Bicolor J. B. M. Camm, Leedsii Superbus, Nelsoni varieties, etc. 1s.
 No. 8. Coloured Plate of a Group of Barr's Beautiful New Daffodil "Queen of Spain." 61.
 A COMPLETE SET OF THE ABOVE PLATES SENT, POST PAID, FOR 6s. No. r. Two large uncoloured Illustrations—one representing a Group of Yellow Trumpet Daffodils, and

 - A COMPLETE SET OF THE ABOVE PLATES SENT, POST PAID, FOR 6s.
 - With Orders for Daffodil Bulbs to value 21s. and upwards, the Two Illustrations, No. 1 will be pre-
 - sented; with Daffodil orders of £5 5s. and upwards, Nos. 1, 3, 7, and 8 will be sent.

 N.B.—A few copies still remain of "Ye Daffodyl," price 1s. This is a record of the First Daffodil Conference, 1884, with a complete descriptive list of all known Daffodils, ancient and modern. See page 25.
- XIII. Barr's Daffodil Prize Medals for 1895, to be awarded by the Royal Horticultural Society, 117, Victoria Street, Westminster, London. The Secretary of the Royal Horticultural Society will supply dates of exhibitions, and make entries, and take charge of exhibits sent from distant parts. Exhibitors residing within a reasonable distance of London are required to attend to their own exhibits. All entries to be made three clear days in advance of the day of exhibition, which is a Tuesday, and should be posted on a Friday, addressed to the Secretary of the R.H.S., 117, Victoria Street, Westminster, London.
- Feb. Best Collection of Forced Daffodils (Polyanthus Narcissi excluded). Open to all classes of exhibitors. Award—Barr's Large Silver Medal.
- March (First March Meeting). Best Collection of Forced Daffodils (Polyanthus Narcissi excluded). Open. Award-Barr's Large Silver Medal.
- March (Second March Meeting). Collection of Daffodils (Polyanthus Narcissi excluded). Open. -Barr's Large Silver Medal. 2nd Prize-Barr's Small Silver Medal. 3rd Prize-Barr's Large Bronze Medal. 4th Prize-Barr's Small Bronze Medal.
- April (First April Meeting).—Same Prizes as offered for Second Meeting in March. Open. April (Second April Meeting).—Same Prizes as offered for Second Meeting in March. Open. May (First May Meeting).—Same Prizes as offered for Second Meeting in March. Open.

- Barr's Daffodil Silver Cup, the great prize for 1895, specially designed by Mr. H. G. Moon, to be awarded to the finest collection of cut Daffodils staged February, March, April, or May. Particulars on page 3.
 - Best Seedling Daffodil (not yet in commerce), raised in England, Scotland, or Ireland, and shown during the season, accompanied by the history of its origin. (Not a Polyanthus Narcissus.) Open. Award—Barr's Silver Flora Medal. (This Prize may be competed for at any meeting of the Daffodil Committee, the last being in May, when the Award will be declared to the best specimen which has been exhibited during the season.)
- Barr's "English Tulips" Prize Medals to be awarded 1895, particulars on page 15.

BARR'S HARDY DAFFODILS, DAFFADILLIES, DAFFODOWNDILLIES.

To these was Awarded the only Gold Medal of the Daffodil Conference, held in the Chiswick Gardens of the Royal Horticultural Society, April 15th, 1890.

NEWSPAPER NOTICES, 1894.

"About ton minutes' walk from Surhiton Station, keeping the path along the line, and passing beneath it to the left, the lover of Daffodils—and who is not?—may feast his eyes on a glorious expanse of dancing blooms, not growing wild, but in the Nursery Grounds of Messrs. Barr, of Long Ditton. The variety is probably nowhers rivalled, and will astonish the minitiated. There are star-shaped and trumpet-shaped flowers, yellow, cream, and white, serrated, and with twisted perianth, Cyclamen shaped, and with straight crowns; flowers with trumpets two inches wide, and diminutive blooms growing in a cluster on a single stem; trumpet blooms of primross hue, and others with orange-scarlet cups and Ismon periantb, though, to our mind, the simple Narcissus of the poets is still the loveliest of them all."—Ecno, April 9th, 1894.

others with orange-scarlet cups and Ismon perianty, though, to our mind, this simple Narcissus of the poets is still the loveliest of them all."—Ecro, April 9th, 1894.

"Hidden away in the lahywith of lanes just behind Long Ditton, on the Portsmonth road, are the grounds of Messrs. Barr and Son, famous for the cultivation of Tulips and other bulbs, but more particularly of Daffodils, which are just now justifying their old poetical reputation for stealing a march upon the swallow by bursting forth into sheets of gold. Mr. Barr is, we learn, away at this time in Spain, pursuing his cearch for new varieties of this beautiful flower, which has already been crowned by so many notable successes; his son, however, is at hand to show us what is worth noting. The Long Ditton grounds extend to fifteen acres, of which five or six are devoted to Daffodil culture; yet from this patch of land, it is found practicable to raise every year millions of bulbs. To the uninstructed eye a Daffodil is simply a Daffodil, but our horticulturists now reckon no fewer than five hundred varieties. Many sorte proclaim their recent accession by such modern names as Henry Irving and Mary Andersou. Some that are found growing wild in various parts of the United Kingdom are supposed to bave heem brought here from abroad by tho monks in old days. That unique little variety the Narcissus Cyclaminus, with its petals turned backwards, was at ons time suspected of being a mere dream. My companion, however, is able to pluck me a specimen. It loves the river's hrim—in other words, delights in moist meadows. It was in 'Bohemia' that the Daffodils of Autolycus' began to peer,' and Perdita, at the joyous sight, gave utterance to immortal lines. Our guide plucks us a specimen of Sir Watkim. Its home is the Welsb valleys, but it is more than rescaped bybrid.' In strong contrast is the Gloria Mundi, with its perianth of delicate sulphur and its cup of red orange. Another flower, the Narcissus maximus, which our conductor mips off for us at the hase of the

learn that the English growers have no fear of foreign rivals."—Daily News, April 11th, 1891.

"Fashions in flowers change with the times, and there is no better instance of this than the attention now devoted to the cultivation of the once despised Daffodil, which is now to be seen in some five hundred varieties, the earliest blooming in February and the latest at the end of May. Messre. Barr and Son, of Covent Garden, are chiefly responsible for the present popularity of these flowers, their constant exhibits at Spring Shows having had effect; while to them is also due in great measure the starting of the Daffodil industry in the Scilly Isles, which has resulted so well for the inhabitants. The amnual show at the Nuresries at Long Ditton this year is a very good one, and distinctly superior to that of lust season, when the quality of the blooms was greatly affected by the dry weather. Some of the rarer sorts are very curious, the Angols' Tears, the Hoop Petticoat, the Cyclamen-flowered, the hold Emperor and Empress, the riebly coloured Gloria Mundi and Glory of Leiden, and the fine Weardale."

Wonld, April 11th, 1894.

"It must be a very inseneate visitor to these Nurseries who can gaze ou the masses of delicats colour, and the innumerable beautics of form presented by the great beds of Daffodils now in bloom, and not feel with Wordsworth:

'My heart with pleasure fills, And dances with the Daffodils.'

The country visitor may wouder, and feel a pang of jealonsy, on seeing the perfection to which Messrs. Barr have brought the culture of the Narcissus family, but to fully eujoy the sight it needs, perhaps, to go down from town, so hot, and dusty, and barren, in spite of the tender green of budding trees in parks and squares. Refreshment of spirit is found in contemplating for a brief April afternoon the

And the green world they live in.

And the green world they live in.*

One of my greatest favourites is Mrs. Langtry. The perianth is ercamy white, and so is the trumper, but for a fringed edge just touched with golden yellow. Beatrice is a pretty member of the Leedsii section; with its widespread perianth, and short, well-opened cup. Newer than either of thece is P. R. Barr, with a pals-coloured perianth and longer trumpet, deep gold throughout. Emperor seems to lead the van with its fine hold form and large size. It has now a rival, hat so new, and so scarce, that Emperor will not suffer for some years to come. This rival made its dibut at the Royal Horticultural Society's Show on April 10th; it is christened Weardale Perfection, and has leaves measuring 1 luch across, while the diameter of the flower is 6 inches. To dy from one extreme to another is to meution, after Weardale Perfection, a quaint, pale Narcissus, Angels' Tears, and a wee Jonquil, brilliant in colour and sweet-seented, hearing a dainty single flower harely a quarter of an inch across. Tulips are well worth a visit. There is a superby yellow one, Ophir d'0r; Koh-i-noor has satiny petals of deep crimson with a purple sheen; but the most wonderful of all is Whits Von Vondel, a Tulip not only remarkable in size (its petals are six to eight inches across), hut of the purest white that has yet heen obtained in this flower."

Queen, April 21st, 1894.

QUEEN, April 21st, 1894.

"Until a week ago the Daffodil, that most joyous of spring flowers, appealed to me for its heauly, rather than its scent, and never did I realize until sauntering through the Surbiton Nurseries of Messrs. Barr and Son, of 12 King Street, Covent Garden, the eweetness of perfume of the growing Daffodils. Here they are to be seen in their thousands, the gardens being literally one sheet of yellow bloom, save for thick masses of crimson that here and there break up the barmony of gold, and prove upon proximity to be Tulips decked in their richest frocks. At their Long Ditton home the Daffodils are seen in the full glory of perfection. There are in all five hundred varieties, the Nurseries covering no less than fifteen acres."—Gentlewoman, April 21st, 1894.

[Barr and Son,

This is what Mr. William Robinson said about Daffodils and their adaptation, in his Paper at the Conference on Hardy Flowers, Chiswick, July 7 and 8, 1891.

"The most important of all early flowers is the Narcissus. Five years ago I planted many thousands in the grass, the most important heing the Star Narcissus (N. incomparabilis, &c.). They have thriven admirably, flowered well and regularly. They are delightful when seen near at hand, and also effective in the picture. With the common English, Irish and Scotch Trumpet Daffodils I have had good results. The Tenby Daffodil is very sturdy and pretty. A very delightful feature of the Narcissus meadow gardening is the way great groups in succession follow each other. Five years ago I cleared a little valley of various fences. Through this runs a streamlet, and we grouped the Poets' Narcissus near it, and in a little orchard that lay near, and through a grove of Oaks. This year the whole landscape was a picture, such as one might see in an Alpino valley!"—See The Garden of April 14, 1894, page 306. The annual effect continues.

THE GREAT PRIZE OF 1895.

BARR'S DAFFODIL SILVER OUP, specially designed by Mr. II. G. Moon, will be awarded, 1895, to the finest collection of Dalfodils exhibited at either of the Meetings of the Royal Horticultural Society, held at The Drill Hall, Westminster, Fehrnary, March, April, or May. Competitors can only exhibit once for this Prize, and, in entering, should see that the entry is duly made for Barr's Daffodil Silver Cup. The judging will he done hy "Points," and at the close of the Daffodil season the R.H.S. will award the Cup to the exhibitor who has gained most "Points," quality will be an important consideration. The above arrangement places English, Scotch, and Irish Exhibitors on equally advantageous footings. The Dates of Meetings will be given in our Seed Catalogue, issued 1st January, 1895.

An Engraving of Barr's Daffodil Silver Cup will sbortly appear in the "Jonrnal of Horticulture."

CULTURE, ADAPTATION, ETC., OF THE DAFFODIL.

DAFFODILS are the most graceful and beautiful of all hardy Spring flowers; they have for centuries adorned our gardens, and withstood uninjured our soverest winters better than any other flower of spring.

For beds, mixed borders and shrubberles, the Daffodil surpasses all spring flowers in beauty and for general effect, and when it is naturalized in grass, in orchards, woodland walks, sloping banks, meadows, margins of lakes and ponds, the effect is superb. All Daffodils may he naturalized, but the strong growers make the finest display, and include such sorts as Emperor, Empress, Horsfieldii, many of the white trumpet varieties, all the Incomparabilis, Barrii, Leedsii, Backhousei, Nelsoni, Bernardi, Tridynns, Odorns, Burbidgei, Poetiens, etc. Many sorts which do not thrive in gardens will sneeced naturalized, and we advise that those kinds which do not take kindly to garden culture he removed to the orchard, meadow or hodgerow. In such places the noble flowers of the Daffodil are seen to great advantage. The slender and dwarf-growing sorts, Nanns, Minimus, Juncifolius, Triandrus, Corbularias, Cyclaminens, etc., do well on rockwork, and select places in grass; Minimus, Juncifolius, Triandrus are found wild in mountain pastures where the soil is shallow and firm; Corbularia and Cyclaminens where the soil is soft and wot in winter and spring, but dry in summer. Mr. T. H. Burrougbos, Stamford, bus, since 18%, grown sneecessfully Corbularia Citrina in undrained milk pans smak in the ground, filled with peat and always kept wet; we can, from personal experience, endorse this mode of culture. For culture under glass, 3 to 6 bulbs of the strong growing sorts cultivated in a pot, the effect is splendid; of the dwarf growing kinds enumerated 6 to 18 bulbs in a pot give a flue effect, and charming as edgings in conservatories. All kinds of Narcissus can be naturalized in grass out-of-doors.

Daffodil flowers can be had from January to June, Firster, hy planting early, in pots or boxes to force, and, secondar.

flowers in May.

Out-of-doors the various kinds of Daffodils form a natural succession. In mild scasous, N. Pallidus præcox and N. Ohvallaris flower carly in February, and are followed by others in succession.

In arranging Daffodils for effect in the flower garden, or in potting up for indoor decoration, let it be borne in mind they form a natural succession, which is fully explained under the heading of each group, and simply noticed here to draw attention to the fact. First, the Trumpet Daffodils are the earliest. Second, Incomparabilis, Barrii, Lecdsii, Odorus, Triandrus, Early-flowering Poeticus, and Burbidgois. Third, Nelsoni, Tridymus, Backhousei, Bernardi, and Jonquils. Fourart, Bildorus, late-flowering Poeticus and Burbidgeis, Schizanthes and Gracilis. In the middle season, representatives from all the groups may be found in bloom at the same time, therefore, those who can make but one visit to our Bulb Nursery, should do so in April.

The Daffodils named in the following pages comprise all the hest sorts in commerce. They consist mostly of varieties we have introduced, raised by the late Mr. William Backhouse, and known as the "Weardale Daffodils," also by the late Mr. Edward Leeds, and known as the "Longford Bridge Daffodils." These New Daffouls Became the property of Mr. Peter Barr, who classed and named them. A complete descriptive list of all Daffodils known to exist from the days of Parkinson to 1884 is appended to a brochure of the First Daffodil Conference, by F. W. B., and entitled "Ye Narcissus or Daffodyl," price 1s.

CULTURE AND ADAPPATION OUT OF DOORS.—The Daffodil may be grown in any soil and situation,

CULTURE AND ADAPTATION OUT OF DOORS.—The Dasfodil may be grown in any soil and situation, but thrives best in a fertile well drained leam (avoid manure as much as possible), and, in the warmer parts of England, when possible, plant in a situation facing north or north-east, protected from north or north-east winds. In planting, the top of the bulb should be two to three iuches below the surface, according to its size; in permanent beds, etc., summer flowers may be cultivated over the bulbs. For such permanent beds use the large-flowering trumpet and Incomparabilis varieties, also Barrii, Leedsii, Nelsoni, Burbidgei, etc.; for edgings, use the dwarf growing kinds, Cyclamineus, Minor, Nanns, Minimus, Triandrus albus, Juncifolius, and Corbularias.

CULTURE AND ADAPTATION INDOORS.—Use three to six hulbs of strong-growing sorts, according to size of bulb, for a 4 or 5-inch pot; small-growing kinds, such as N. Minimus, Nanus, Minor, Cyclamineus, Triandrus, Juncifolius, and Corbularia, a greater number of bulbs should be used. These dwarf-growing, small-flowered species are most charming in pots (see bis, page 13). If Daffodlis are grown for cutting early in the season, plant thickly, in boxes of 15 inches by 10, and 5 to 6 inches deep, using ordinary potting soil. The pots or boxes should then be placed out of doors, on a bed of askes, and covered with 6 inches of the same material, or with cocoa fibre, if it can be had. The pots or hoxes to remain out of doors till full of roots, and top growth has commenced. Portions may then be removed indoors, in succession, to a woist forcing-house, and plentifully supplied with water, care being taken that the plants do not cot drawn from an insentificious supply of pir. get drawn, from au insufficient supply of air.

A selection of Daffodlis for succession ont-of-doors should consist of varieties from the three groups. The Trampet and Corbularia Sections flower, one variety following the other, from February till May. The Nousach and the other hybrid sections hegin flowering in March, and succeed each other till May. The Burbidge's Daffodils, the Poet's, the Burch-flowered, etc., commence flowering early in April, and furnish a succession of blossoms till June. When grown under glass, all the Daffodils flower probably a month earlier than the periods above named.

Cut hlooms of Dalfodils are always acceptable, and are in abundance on the doors at a season when other flowers are scarce. They supplement and associate admirably with hot-house flowers. For nearly thirty years, for three months in Spring, cut flowers from our collection of Daffodils have been exhibited at the various London Flower Shows and Fortnightly Meetings of the ROYAL HORTICULTURAL SOCIETY, also at the Spring Flower Shows held at the ROYAL BOTANIC GARDENS, CRYSTAL PALACE, ROYAL AQUARIUM, BIRMINGHAM, MANCHESTER, etc.

At the above-named Exhibitions we have been awarded Gold and Silver Medals, Prizes, Certificates, Votes of Thanks, etc. Our Display of Daffodils at the Second Great Daffodil Conference, April 15th, 1890, was awarded the ONLY GOLD MEDAL. At the Birmingham Daffodil Show, April 18th, 1894, we were awarded the PREMIER PRIZE for the "FINEST DAFFODIL" exhibited. This season we have been awarded Sixteen Medals and Five Certificates.

12 and 13 King St., Covent Garden, 1894.]

BARR'S PRIZE MEDALS OFFERED FOR CUT DAFFODIL FLOWERS, February, March, April, and May, 1895, see Special Notices, p. 2 of cover. BARR'S DAFFODIL PRIZE CUP for 1895, see p. 3.

SELECTIONS OF

BARR'S High Class & Distinct Hardy DAFFODILS (NARCISSI),

EMBRACING GROUPS MAGNI-CORONATI, MEDIO-CORONATI, and PARVI-CORONATI.

The varieties in these assortments consist largely of the fine hybrids and varieties raised by the late Mr. William Backhouse and Mr. Edward Leeds. They are all distinct one from the other, so that buyers eannot fail to be fully satisfied with them. Daffodils in these assortments may all be used for pot-culture or forced for cut flowers, or planted in beds, in flower borders, naturalized in grass, in woodland walks, orehards, by streams, lakes, etc., the effect in Spring far surpassing that of any other family of plants.

EXPLANATORY NOTES.

The following list of Daffodils embraces the highest class, and most distinct varieties, surpassing in beauty and diversity all other assortments offered to the public. The varieties represent the cream of our Collection (about 500 kinds), mostly new sorts, some of which were offered for the first time 1887, 1888, 1889, 1890, 1891, 1892, 1893, and the present year.

*	New Daffodils	introduced	by us up to	1886.	4	New Daffod	lils intr	oduce	d by us up	to 1891.
- {	"	99	**	1887.	11	11		,,	"	1892.
‡	99	99	**	1888.	**	31		,,	11	1893.
ţ	21	**	"	1889.	§§	,,		3 9	**	1894.
3	"	99	11	1890.						

Those without any special indication were known before these New Daffodils were introduced by us.

- Explanation why different sized types have been used in the NAMES of the Daffodils.
 - (1). EMPEROR. This type indicates the higher quality.
 - (2). ALBICANS. This type indicates the next quality.
 - (3). MAJOR. This type indicates the lower quality.

The very distinct species which do not admit of comparison, such as Corbularia, Cyclamineus, Minimus, etc., we place with the higher quality, and those which rank above the higher standard are indicated by the word extra.

5/6.

DAFFODILS. - GROUP I. - MAGNI-CORONATI (BAKER).

Ajax of Salisbury, Haworth, and Herbert, Pseudo-Narcissus of Parkinson; including Corbularia (Bulbocodium). The Hoop Petticoat, or Medusa's Trumpet.

DISTINGUISHING CHARACTER.—Crown or trumpet as long or rather longer than the divisions of the perianth.

This Group I. is commonly called Trumpet Daffodils, which flower in the following succession: N. Pallidus præcox, from January; Obvallaris, Minimus, Nanus and Minor, from February, closely followed by Cyclamineus, Santa Maria, Oporto Yellow, Rugilobus, Major, Spurius, Golden Spur, Henry Irving, the English Lent-Lily, the Scotch Garland Lily, Horsfieldii, Empress, Johnstoni Queen of Spain, Princeps, Cernuus, Colleen Bawn, etc., which are followed by Emperor, Maximus, Dean Herbert, Michael Foster, James Walker, the two Camms, the two Burbidges, Dr. Hogg, Cernuus pulcher, Exquisite, Grandis, etc.

All the Trumpet Daffodile ars prized for pot-culture, flowering under glass with the Hyaointh, and should be oultivated in the same way, three to five roots in a 4 or 5-inch pot. The out flowers of Daffodile are much in demand for bouquets and vasss. For general cultural directions, see page 3.

DAFFODILS.-GROUP II.-MEDIO-CORONATI (BAKER).

Queltia, Philogyne, Ganymedes, etc., of Salisbury, Haworth, and Herbert; Peerless, Nonsuch, Chalice-Shaped Crown, etc., of Parkinson.

DISTINGUISHING CHARACTER—Crown or cup half as long as the divisions of the perianth, but in one or two cases three-quarters as long.

The graceful varieties of this group are hybrids, excepting Triandrus, Odorus, and Juncifolius, which are species. Incomparabilis is found wild in France, but Herbert, Leeds, and Backhouse produced it by crossing Poeticus with a Trumpet Daffodil. Macleaii (Panza bicolor of Salisbury) is considered to be a hybrid between a Tazetta and a Trumpet Daffodil. Although we have no positive data as to the parentage of all the new hybrids and varieties described in this group, we think it may fairly be assumed that Poeticus and the Trumpet Daffodils gave all the varieties of Incomparabilis, Barrii, Leedsii, "the Eucharti-like Daffodil," Humei, Nelsoni, Backhousei, and Sabini. Bernardi we know to be a hybrid between Poeticus and Variiformis, Mr. Barr having collected it from amongst these two species. Tridymus is a hybrid between a Tazetta and a Trumpet Daffodil.

The varieties in this group commence flowering in March, and furnish a succession till May. They are all of great elegance and beauty, and, as cut flowers, are extensively used for furnishing vases and table bouquets.

All the varieties enumerated in Group II. are prized for pot-culture, flowering under glass with the Hyacinth, and should be cultivated the same way, 3 or 5 large bulbs in a 5-inch pot; Narcissus with small bulbs, such as Triandrus and Juncifolius, 6 to 12 bulbs to a 5-inch pot. The cut flowers of this Group are much in demand for bouquets and vases. General cultural directions, p. 3.

NARCISSUS INCOMPARABILIS.

(Star Narcissus.)

Nonsuch, Peerless, and Chalice-cupped Daffodils.

All the varieties of Incomparabilis are exceedingly decorative in pots, and are extensively used for this purpose, 3 or 5 bulbs in a 5-inch pot. For beds and borders very decorative, naturalized in grass very effective. See what Mr. William Robinson says of them under the name "Star Narcissus," p. 3.

DAFFODILS .- GROUP III .- PARVI-CORONATI (BAKER).

The Small-crowned Daffodil or True Narcissus, which includes

Burbidgei and Poeticus (the Purple-ringed Daffodil); Biflorus (the Primrose-Peerless Daffodil); Polyanthus or many-flowered Narcissus (Hermione and Helena of Haworth); Gracilis, Schizanthes orientalis, and Sweet-smelling Jonquils.

DISTINGUISHING CHARACTER—Crown less than half as long as the divisions of the perianth.

In this series, Pocticus (the purple-ringed Daffodil) is the true Narcissus; Burbidgei is a hybrid one remove from Pocticus, and is the connecting link between Groups II. and III. (See Coloured Plate in "The Garden," 1880.) Biflorus is Parkinson's Primrose-Peerless, and is certainly a hybrid of Tazetta and Poeticus, Mr. Barr in his travels this year having found it and its parents growing together in two different localities in the South of France. Gracilis and Tenuior are the Helena of Haworth; Jonquil, the Jonquilla of Linnæus; Polyanthus Narcissus, the Hermione of Haworth and Tazetta of Sibthorp.

The early-flowering Poeticus varieties commence flowering in March, and the late-flowering varieties close the Daffodil season in June. Burbidge's hybrids of Poeticus flower in succession from March to middle of May. Gracilis, Schizanthes orientalis, and the Double White Gardenia-flowered Daffodil, are among the latest

to bloom.

The Daffodils in this Group are graceful pot-plants for indoors, flowering with the Hyacinth, and should be cultivated in the same way, 3 or 6 bulbs in a 4 or 5-inch pot. The cut flowers of this section are greatly in demand for bouquets and vases. General cultural directions, page 3.

NARCISSUS BURBIDGEI.
(Star Narcissus.)
Burbidge's Hybrid Poet's Daffodils.
These are all light and graceful for indoors 3 to 6 in a pot, and elegant in beds, borders, and naturalized. See what grand effect Mr. William Robinson produced with the varieties of Poeticus at Gravetye Manor, page 3.
The Burbidgei Narcissi differ from N. Poeticus in
the cup of the flower being a trifle longer; they commence flowering in advance of Poeticus ornatus, and flower in succession one variety after another from March to the middle of May. per doz. each

Mr. T. H. Burroughes, Stamford, has successfully grown, since 1887, the Large Sulphur Hoop Petticoat Narcissus in undrained milk pans filled with peat and kept always wet; he raises the soil in which the bulbs are planted above the level of the rim of the pan. We have tried this mode of culture with success, and recommend it for all the varieties of this section, except the White Hoop Petticoat. N. Cyclamineus likes moisture, but not so much as the Hoop Petticoats. N. Minimus, N. Triandrus, N. Juncifolius, and N. Rupicola are found in a wild state growing in shallow soil.

A SELECTION OF

CHEAP DAFFODILS FOR NATURALIZATION IN GRASS, &c.

On page 3 will be found an extract from Mr. William Robinson's Paper read at the Conference on Hardy Flowers, Chiswick, July 8 and 9, 1891. The grand effect produced, combined with the pleasure he enjoyed at Gravetye Manor from Narcissi planted in Meadow, orchard, and Oak Grove, was such as he might have experienced in an Alpine valley, but with this difference, he could gaze on the scene and enjoy the pleasure daily, and all this at a comparatively small outlay. Mr. Robinson has had a successful experience of nine years with his naturalized Daffodils

BARR'S BEAUTIFUL "ENGLISH AMATEUR" TULIPS.

May-flowering.

Awarded by the Royal Horticultural Society a Silver Medal, May 9th, 1893.

Awarded at the Temple Show, the Royal Horticultural Society's Silver Cup, May 25th, 1893, and the R.H.S. Silver Gilt Flora Medal, May 8th, 1894.

These beautiful Tulips in the South of England commence flowering according to the carliness or lateness of the season, from the first to the last week in May. Dr. Hogg can testify that if looked after they may be enjoyed for a month. The "ENGLISH TULIP" is pre-eminently an amateur's flower, and has been so for about 300 years. London was at one time the centre of Amateur Tulip growers, Scotland then dividing the honour. The Amateur element at the present time is mainly centred in Derbyshire, Lancashire, and Yorkshire, and in these counties many fine varieties have been raised during the last forty years. Amateurs who may be induced to take up Tulip culture will be pleased to read the following extract from the Manchester Guardiam, 2nd June, 1802, from the pen of the late Mr. Samuel Barlow, one of the greatest authorities on "ENGLISH AMATEUR" TULIPS:—

"The best Amateur Tulips known to exist, or that have ever existed, have been raised in England, principally in the Northern counties—Lancashire, Yorkshire, and Derbyshire. Over forty years ago the late Dr. Hardy, of Warrington, in a series of papers to the Midland Florist, completely settled all the points of excellence which go to make a first-class Florist Tulip, and his definitions have never since been disputed. Since then the cultivation of Florist Tulips has much improved, expectally in the three counties named, although, it is the South of Florist tulips have got the most enthusiastic. singular to say, it has almost died out in the South of England, where, fifty years ago, the most enthusiastic Tulip growers made London their centre for exhibitions. There are distinct evidences now of a revival of interest in the South of this grand old flower, and I hope that the Exhibitions of the Royal National Tulip Society will give additional stimulus to the cultivation and love for this fascinating flower."

Barr's Prize Medals for 1895 will be awarded by the Royal Horticultural Society, 117, Victoria Street, Westminster, London, at two meetings in May and one in June for "English Amateur" Tutips, to give exhibitors from the North and the South equal chances for competition; dates for competition will be fixed in November. 1st Prize, Barr's Large Silver Flora Medal. 2nd Prize, Barr's Small Silver Medal. 3rd Prize, Barr's Large Bronze Medal. The competition will be for the targest and finest exhibit. Fuller particulars on application.

The Rev. Francis D. Horner, a most successful Amateur Tulip cultivator and raiser of new varieties, read a valuable paper on "Amateur Tulips" to the Fellows of the Royal Horticultural Society, April 19, 1892, and the same will be found in Vol. XV., Parts 2 and 3, "Journal of the Royal Horticultural Society," page 99. We commend it for perusal by intending Amateur Tulip Cultivators.

In "Hardy Florist Flowers," by Mr. James Douglas, there is a chapter on "English Tulips," which deals with the whole subject of planting, lifting, and general culture.

Our Woodcuts represent the upper sections only of Tulip petals, The one on the left shows what is termed a feathered flower, the colour being confined mainly to the edge of the petal. The right hand block represents flamed flower, the colour runs round the edge of the petal, and in the centre breaks into a flame.

The Woodcuts are simply intended as representations of typical markings. But it is as

well to state, however, that there is a certain variability in the colouring of these "Amateur Tulips" from one year to another, and it is seldom a flower repeats exactly the same amount of colouring in its dress, but even this is not without its interest to Amateurs; a feathered flower will sometimes become flamed, and a flamed flower feathered. The colour will sometimes be heavier and sometimes lighter, this difference being often the result of culture.

Our Collection of "English Amateur" Tulips numbers about 450 varieties, of these about 20,000 bulbs will be planted this Autumn, and the flowers may be seen by visitors during May, 1895, at our Nurseries, Long Ditton, a few minutes from Surbiton Station, on the South Western Rail.

Condensed from the Journal of Horticulture, June 2nd and 9th, 1892:-

"ENGLISH TULIPS."—The name, "English Tulips" has something beyond insular pride to recommend it. In the 333 years which have clapsed since Conrad Gesner brought Tulipa Gesneriana from Constantinople, marvellous work has been accomplished by hybridisers with this species, but it was in England (during the last fifty may venous work has been accompissed by hybridisers with this species, but it was in England (airing the last fifty years) that the properties which are most estecmed in the best Tulips of to-day—perfect form, smoothness, substance of petal, and clean base—were developed. (From a gathering together of bulbs from many sources during 1893, we find that the old Tulip Amateurs in England, Scotland, and Holland grew a larger and coarser towering Tulip than the Amateurs of the present day, and very few of their flowers possessed the clean base which at the present period is an indispensable requisite. The shape and substance was also much inferior to the Tulip of the present time. The Scotch Amateurs have died out, and the Dutch growers have made no forward progress, so that the remarks in this article of the "Journal of Horticulture" refer to the Tulips of the English Amateurs in the Northern Counties solves drogress has been steadily aging on the the fifth were

Amateurs in the Northern Counties, where progress has been steadily going on for the last fifty years.

The absorbing interest of the "English Tulips" does not he solely in their beauty of form and rich markings. Their life-history is not the unbroken, uneventful one that other flowers enjoy. There comes a time when the self-coloured seedling flower is a self no more, the rose, scarlet, or violet shining above the central silvery moon or ground of the Byblemens and Roses, or the golden base of the Bizarres, breaking upwards into marvellous featherings and flamings of colour, reminding one of the contrast between the dull cocoon and the brilliant, fluttering butterfly. The new shades are not the vagaries of a day, but, once the flower breaks into its radiant colours, they remain to dazzle and delight those who see them. The "breeder" (scedling) that is,

12 and 13 King Street, Covent Garden, 1894.]

the self-coloured Tulip in its first stage is, so to speak, but the canvas prepared for the painting, and when in

the self-coloured I ulip in its first stage is, so to speak, but the canvas prepared for the painting, and when in due course the colours are mixed and the picture completed, it is one that will not fade under the hand of time. For a long time it seemed as if they would have no trade home; but a colony, and not a small one, has been formed at Long Ditton in Messrs. Barr & Son's grounds of Daffodil fame. If Mr. William Barr can do for and with these Tulips a tithe of what the energetic and devoted head of the firm did for the Daffodil, he will make himself a name that will not soon be forgotten. The young fancier is enthusiastic, diligent, and careful, as was evident when note was taken on a sultry day of 5000 or 6000 individual blooms, under the cool guidance of a veteran (Dr. Hogg).

Condensed from the Journal of Horticulture, May 4th, 1893:-

The Dutch Florists' Tulips are wholly distinct from and distinctly inferior to the type of "English Amateur"

The Dutch Florists' Tulips are wholly distinct from and distinctly inferior to the type of "ENGLISH AMATEUR"
TULIPS. This is plainly seen when extensively grown in comparison, as in Messrs. Barr & Son's Collection.

It may be asked, "Why are not these 'English Amateur' Tulips more popular? Because there has been no attempt to popularize them. Connoisseurs as a body have valued them for their rarity, and have not willingly let them "go," Years of unremitting care in their preservation, following years of waiting from the flowering of seedlings to the breaking from the self-coloured or breeder stage into the flames of colour or feathered fringes that come to stay (see Woodcuts), and give life-long pleasure to those who own and cherish them. Is there much wonder that they should be jealously guarded.

The choicer and rarer named varieties of "ENGLISH AMATEUR" TULIPS have hitherto been difficult to obtain but Mr. Peter Barr has taken them in land and the same energy, perseverance, and knowledge which

The choicer and rarer named varieties of "ENGLISH AMATEUR" TULIPS have hitherto been difficult to obtain, but Mr. Peter Barr has taken them in hand, and the same energy, perseverance, and knowledge which, from the smallest of beginnings, resulted in the world-famed collection of Daffodils, is bound to have effect in a very material way in inciting public interest in our "English Amateur" Tulips.

Mr. Barr is a believer in the dictum that the supply of anything good creates a demand, as his "English Amateur" Tulips come from the best sources and are increased at Long Ditton, where they now number many thousands. The demand for bulbs last year was good, and has given an impetus to production.

number many thousands. The demand for bulbs last year was good, and has given an impetus to production.

The Long Ditton Collection is in full beauty now (early in May), and the collection, while full of interest to experts, affords valuable lessons for learners. Day by day, from far and near, come old florists and young aspirants to view them. Every flower is scanned, its points noted, and merits or defects recorded.

Extracted from the letter of an Amateur grower of "English Amateur" Tulips:—"Ever since you were here I have been noting and criticising my Tulips, and to such an extent has the subject grown upon me I am quite as daft on the subject as ever you were on the Daffodils."

Condensed from the Journal of Horticulture, May 10th, 1894:-

"ENGLISH AMATEUR" TULIPS are the most brilliant of all the hardy flowers of early summer, and there is hope that their claims to attention will not be so completely ignored in the future as they have been in the comparatively recent past in the southern parts of England, for in the north there have always been a number of connoisseurs who have devoted great attention to and derived an extraordinary amount of pleasure from their

Tulip beds and shows.

That a revival in public interest is being awakened in these brilliant, chaste, and refined flowers is apparent. Information respecting them is more generally sought for, and a demand for bulbs of approved varieties is springing up. Mr. Peter Barr, with his acute intuitiveness and boundless energy, is trying to meet the demand (or shall we say create it?) by increasing his supplies, and amateurs who have become fascinated by their flowers are influencing others in the same direction, while the once seldom-heard-of Florists' Tulips are now recognized by the Page Meating Increasing the same direction, while the once seldom-heard-of Florists' Tulips are now recognized. by the Royal Horticultural Society. Tulip shows have done much to teach those who visit them wherein the

by the Royal Horticultural Society. Tulip shows have done much to teach those who visit them wherein the beauty consists of the blooms that stir the souls of those who love because they understand them.

Undoubtedly one of the best private schools for instruction to be found is a Tulip bed, not a mere mass of flaming flowers such as may be seen in hundreds of gardens; but a genuine canvas-covered Tulip bed, planted on recognized cross lines of seven bulbs in a row, no more and no less, of bizarres, byblœmens, roses, and so on from end to end, every variety cherished for some precious possession, and of course all named. But Tulip beds are not everywhere to be found. We may have to travel miles to see one; but to the novice there is the freshness of novelty to repay him, and he discovers how much there is to learn, also what a fund of interest Tulips possess, and the extraordinary pleasure they give to their owners. The writer has now had four Tulip lessons in as many years, and the dates impart a lesson. The first visit was June 6th, 1891; the second June 3rd, 1892; the third April 29th, 1893; and the last May 5th, 1894. This at once indicates the relative earliness and lateness of the seasons, for Tulips are emphatically children of the sun, and come only at his bidding.

When a really good collection of Tulips is in the market it would seem as if all the world of fanciers were after it, and the disposal can only be determined by amicable division, so strong is the desire for their possession. The outside world cannot understand this, simply because outsiders—the unlearned in Tulip attributes—do not understand what is to the cognoscenti the rarest gems in the floral world.

understand what is to the cognoscenti the rarest gems in the floral world

For decorative purposes late Tulips of the section under notice are highly effective by their chaste or rich markings, even if defective in certain points as viewed from the florists' ideal. Mixed unnamed collections impart beauty to the garden, while affording opportunity for studying the flowers. In this way the eye becomes educated, and in time collections are formed to be cherished; but some named varieties of high repute are scarce, and prized the more by those who are fortunate in possessing them. Still, many fine named varieties are sufficiently plentiful to be sold at moderate prices, and are as beautiful as some of the rarer sorts, so that price is often more an indication of variety than of curvitar heavy. is often more an indication of rarity than of superior beauty.

BARR'S BEAUTIFUL "ENGLISH AMATEUR" TULIPS.

** Awarded by the R.H.S. a Silver Flora Medal, May 9th; and a Silver Cup, May 25th, 1893; and May 8th, 1894, awarded a Silver Gilt Flora Medal by the R.H.S.

Explanation of the terms Rectified and Breeder Tulips.—Rectified Tulips are those in which the original seedling self-colour has changed into a flamed or feathered variegation. Breeder Tulips are those which are still in their original seedling self-coloured state, but may at any time become Rectified.

HELLEBORUS NIGER, OR WHITE CHRISTMAS ROSE.

These flower in December and January, and to have pure white blossoms for Christmas decoration the plants should be protected at flowering time. A hand-light, resting on bricks, will be sufficient for a large specimen; but when a great number of flowers are required, strong clumps should be planted in a temporary pit, and when the flower buds appear, protect with lights, which, however, should be dispensed with as soon as possible after the flowering season. For naturalization in wild gardens, orchards, and on moist grassy banks facing the north, etc., the Christmas Rose is a grand plant.

1 We offer good clumps as below.

Selections of	of Christmas	Rose	s, 6	in	6	varieties	
H 721					6	**	

12 and 13 King St., Covent Garden, 1894.]

HELLEBORUS ORIENTALIS, and VIRIDIS, or LENTEN ROSES.

The Hellebores in this section are quite distinct from Christmas Rosss. The plants are taller, and generally with a bushy branched growth, so that when well grown specimens are in flower, they resemble great floral bouquets at a season when the temperature is too cold for most other plants to expand their blossoms; their colours range from pure white to deep plum-purple, with the intermediate shades of rose and pink, the petals more or less spotted; they are distinguished from the section of H. viridis by the old leaves remaining on the plants till the new ones supersede them. H. orientalis and H. viridis are decorative during the Lenten season, hence the name "Lenten Roses" given to them by Mr. Barr when working the family into form some twenty years back. The varieties make good showy plants when grown in pots.

BARR'S HELLEBORUS VIRIDIS, or the GREEN-FLOWERED LENTEN ROSE.

This section is distinguished by the leaves disappearing in autumn. The colours range from sea-green to dove-purple, and in winter and spring they are really attractive border plants, and charming when naturalized in woodlands, wild gardens, etc. In pots they form a distinct and interesting feature amongst flowering plants.

HEMEROCALLIS (DAY-LILIES).

These are very ornamental border-plants, and admirably adapted for shrubberies and wild gardens. When the flower buds are opened in water, the bronzy tints change to a delicate apricot. H. Flava and H. Thunbergi have clear yellow flowers with a delicate perfume, much prized for bouquets. They bloom from June to August.

HEPATICA (OLD ENGLISH FLOWERS).

These are charming Spring flowers, and bave been favourites in English gardens from time immemorial. Established on banks, in beds, borders, and rockwork, they are most beautiful in early spring. The Hepatica is a deep rooter and loves a deep loamy soil in somewhat shady and sheltered positions. Naturalized the Hepatica looks charming. H. angulosa has been awarded a First-Class Certificate by the R.H.S.

BARR'S BEAUTIFUL FLAG IRISES.

For Flower Beds, Borders, Shrubberies, Edgings, Ponds, and Naturalization.

The Iris is the "Orchid" of the flower garden; its blossoms are the most rich and varied in colour of hardy plants. It should be extensively planted in flower and shrubbery borders, woodlands, and wild gardens. As a cut flower the Iris is valuable, competing in richness and variety of colour with the choicest and most beautiful of Orchids. When established, the plants yield a great quantity of bloom.

To cut for filling vases and for table bouquets, all the Flag Irises are admirably adapted, and few flowers excel them in beauty. When necessary to forward the flowers to a distance, gather the buds just before expanding, and, like the Gladioli, they will open in water.

IRIS BARBATA, Commonly called German Iris, The Tall Bearded Flag Iris.

Our Collection of the Bearded Iris is the most complete in Europe, and those enumerated are selected

from upwards of 200 varieties.

The flowers in this Section of Bearded Iris are all large and handsome, more or less beautifully mottled. in the standards and reticulated in the falls; the beards range from delicate primrose to orange, and the petaloid stigmas not unfrequently enhance the general effect by a contrast of colour. There is no flower that so improves

stigmas not unfrequently enhance the general effect by a contrast of colour. There is no flower that so improves by examination as the Iris. Its beauty at first sight rivals that of the Orchid, but, on closer examination, we have no hesitation in saying there are points of interest in it not to be found in the finest Orchid. In colours there are the richest yellows, the most intense purples and delicate blues, the softest mauves and most beautiful claret-reds. There are whites, primroses and bronzes of every imaginable shade—language, indeed, fails us in picturing all the beauties of this flower. Those who have not used these Irises for surrounding artificial lakes and ponds, or cultivated them in flower-borders, shrubberies, woodlands, or old gardens, should do so.

We have arranged this section of Iris Barbata in natural groups, to facilitate amateurs in making selections. Each group has a distinct character. I. germanica flowers in May, and is represented by the blue, purple, and white Flag Irises of our gardens; following, in June, come the varieties of I. aphylla, with the standards or upright petals having a frill-like coloured margin on a white ground; I. amæna with white standards; I. neglecta with standards running from lavender to purple; I. pallida with standards ranging from pale lavender to rose-lilae. The standards of I. squalens run in cloudy shades of bronze, copper-colour, fawn, etc., which are so beautiful and uncommon as to command universal admiration; while I. variegata has the standards yellow, or tending to yellow. All are delicately fragrant.

BEARDLESS SPECIES OF FLAG IRISES.

The Irises offered in this Section are all perfectly hardy, and quite distinct from the Bearded Group. Those marked thus † are fine semi-aquatics, as well as beautiful border-plants. Cristata has lovely amethystblue flowers, and is charming on banks and rockwork in sunny sheltered spots, where it can be moderately dry during winter. Stylosa, and its white variety, flower in winter, and are great beautics, but they should be grown where they can get a good rest and roasting in summer and be moderately dry and sheltered in winter, and this is easily attained if planted near some deciduous summer-slowering plant, which will absorb the surrounding moisture in summer and go to rest in winter. Fatidissima is often naturalized in a partially shady wood, but as a wild plant it grows generally on dry banks; the seed vessels are full of scarlet berries, and much prized for winter decorations.

A descriptive list of the above beautiful Dwarf Bearded Flag Irises sent on application.

BARR'S BEAUTIFUL JAPANESE FLAG IRISES. IRIS LAEVIGATA (syn. KŒMPFERI), THE CLEMATIS-LIKE IRIS OF JAPAN.

The magnificence of these splendid new Japaness Irises surpasses any written description that we could give of them. The large flat flowers measure from 6 to 8 inches in diameter, with a breadth of petal 3 to 33 inches; the prevailing colours are white, red-purple, crimson, rose, lilac, lavender, French-grey, purple, violet, and blue, each flower usually representing several shades, while close under the petaloid stigma there is a brilliant yellow or orange blotch or feather, more or less conspicuous, and almost always surrounded, except in the whites, by a halo of blue or violet. Plates of Iris laevigata (syn. Kompferi), appeared in The Garden, 1876 and 1881.

CULTURE.—A naturally good adbesive, moist, loamy garden soil, lying well to the sun, suits these plants. When a soil has to be specially prepared, we recommend leaf-soil, loam and peat in equal parts, but manure should not be given unless as a liquid. We are of opinion that the Iris laevigata (syn. Kampferi) is semiaquatic in summer, but should be moderately dry in winter. Professor Foster's experience is to keep the soil round the plants in a wet quagmire state, from early in April to October.

Strong clumps may be had of these Irises at double price, and these, with proper treatment, should give abundance of bloom the first season.

RF A descriptive list of Beautiful Japanese Flag Irises sent on application. English, Spanish, etc., Irises, will be found enumerated and described in our AUTUMN BULB CATALOGUE. Barr and Son.

BARR'S BEAUTIFUL HARDY LILIES.

CULTURE OUT-OF-DOORS.—In choosing a situation for planting, perfect drainage, natural or artificial, should be the first consideration. The borders of Rhododendron and Azalea beds, and such-like positions, are generally suitable for Lily culture, as the necessary compost for the particular species can easily be given, and the shelter from the surrounding branches is beneficial in protecting the plants in spring, and also affording a protecting the protecting the given the surrounding branches in the given the given the given the given and the spring a partial shelter from the surrounding transfer in the given and the shelter from the surformanding branches is beherefal in protecting the plants in spring, and also another ing a partial shelter from the sun's rays in summer. In preparing the ground, loosen the soil to a depth of several feet, and add fresh loam, coarse sand, and sweet decomposed leaf soil, or good peat, care being taken that the soils are as free as possible from insect life, and the compost sufficiently friable. Plant the bulbs 4 to 6 inches deep (except where otherwise stated), and let them remain undisturbed for many years, as when once established the Lily objects to being moved. The bog or swamp-loving Lilies, Superbum, Canadense, and the varieties of Pardalinum, require a moist peaty soil and rather shady situation; they are admirably adapted for growing amongst Rhododendrons and Azaleas in moist situations, and for the sides of brooks, ponds, rivulets, etc.

CULTURE IN-DOORS,-When grown in pots, the Lily should have a compost of fibrous loam and sweet decomposed leaf soil, with plenty of coarse sand, or good peat, loam, and sand, the bulb being potted firmly, and the top covered at least two inches; this done, plunge the pots in ashes or cocoa fibre out of doors, under a wall or hedge, facing the north; and to avoid stagnant moisture the plunging ground should be raised a little above the general level, and the ashes made firm, on which the pots stand, to prevent worms entering; there let the Lilies remain till the flower buds are formed, when they may be removed to the conservatory, corridor, or sitting-room. Lilies in pots, when removed from the ashes, should have clear weak liquid manure twice a week. The drainage of the pots must be good, or the soil will become sour and the bulbs rot. Superbum, Canadense, and the varieties of Pardalinum, prefer moist sandy peat.

A full descriptive list of Lilies will be sent on application.

BARR'S BEAUTIFUL HARDY SINGLE PÆONIES.

MAY AND JUNE-FLOWERING.

Elegant Herbaccous plants bearing in profusion flowers of great beauty, and valuable for flower borders, beds on lawns, shrubberies, rock-gardens (as on the rockwork at Kew Gardens), and for naturalization.

The beautiful and we may say rare species and varieties of SINGLE EUROPEAN PÆONIES offered in the following collections are comparatively new to gardens, and some of them are new introductions. We can confidently recommend them as possessing considerable character and diversity in foliage and habit of growth; some are tall with a fine bold outline, others dwarf and bushy; the flowers of some are large and poppy-like, while others are not unlike water-lilies.

BARR'S BEAUTIFUL HARDY SINGLE EUROPEAN PRONIES-continued.

A more interesting class of plants for flower border decoration it would be difficult to find. Their value is still further enhanced by their thriving under large trees and thus capable of supplying the necessary floral display often wanting in partially shaded walks, etc. Culture, any ordinary garden soil enriched with manure.

BEAUTIFUL NEW HARDY SINGLE CHINESE PAONIES.—June-flowering. (VARIETIES OF ALBIFLORA.)

These Single Chinese Pæonies have flowers of great size and beauty, in colours ranging from pure white to rose-pink and bright and deep crimsons. They bloom in June, and are exceedingly decorative plants for herbaceous borders and to intermingle with shrubs, etc. Culture, any ordinary garden soil enriched with manure.

BARR AND SON'S SELECTIONS OF CHINESE SINGLE PÆONIES.

12 in 12 beautiful varieties, 35/ & 50/ | 6 in 6 beautiful varieties, 15/, 21/ & 30/ 193 A descriptive list of Chinese Single Pæonies sent on application.

BARR'S BEAUTIFUL HARDY DOUBLE CHINESE PEONIES.

These magnificent flowers open in June and July, are large and handsome, and vary in colour from pure whites and blushes to roses and the deepest crimsons, while most of them are more or less rose-scented. The ornamental and massive character of the foliage make these Hardy Pæonics attractive plants for the herbaceous border or to intermingle with shrubs. They are of simple culture, succeeding in any ordinary garden soil. The flowers are greatly valued for cutting, as they travel well, and last long in water. If these Pæonics are planted in beds or groups in the borders, Lilies, especially the varieties of L. speciosum and L. auratum, should invariably be associated with them, as they grow well together, and succeed each

L. auratum, should invariably be associated with them, as they grow well together, and succeed each other in time of flowering.

CULTURE.—Trench the ground before planting, as deeply as possible, adding abundance of rotten manure, and after planting mulch the surface with manure. In Summer, if convenient, give a plentiful supply of liquid manure twice a week to encourage a rapid development, as the plant is decorative in proportion to its size. The Paony may be planted in any position, but, considering that the flower buds are formed early in Spring, it is preferable to grow the plants where the sun's rays in Spring do not fall upon the buds earlier than 11 or 12 clotch.

o'clock.

For several years past the Royal Horticultural Society has been collecting together the Paeonies grown in England and on the Continent with the view of reconciling their nomenclature, and, at the same time, indicating, as far as they can, the best sorts to grow. Our contribution was upwards of 100 sorts.

HARDY DOUBLE MAY-FLOWERING EUROPEAN PÆONIES.

These are varieties of Paonia officinalis, except Double Purple, which is P. paradoxa of Anderson (see Sweet's British Flower Garden) and P. tenuifolia.

The varieties of P. officinalis are very old inhabitants of our gardens, and, at the present day, like many "Old Pashioned Flowers," are being generally appreciated, and well they may, as few plants are so elegant in outline and so free-flowering and decorative as the old Double Red, Rose, and the White, which latter opens the most charming of pinks and passes off white. In shady groves under tall trees, these European Paeonics thrive and are happy; while in beds or as single specimens they are exceedingly effective.

BARR'S BEAUTIFUL PERENNIAL ASTERS (Starworts).

Best known as MICHAELMAS DAISIES.

Awarded a Gold-Gilt Silver Medal on Oct. 8th, 1892, at the International Horticultural Exhibition.

CULTURE.—The Michaelmas Daisy is extremely hardy, of the easiest culture, and succeeds in all soils and situations, being uninjured by the most severe winter, and requiring no protection whatever.

BARR'S NEW HARDY DELPHINIUMS, or Perennial Larkspurs.

These are handsome stately border-plants with long bold flower spikes, from clear pale blues to the darkest indigo, violet, etc., some tinged with rose, pink, or purple, and all with the bec-like centres.

CULTURE.—Delphiniums are perfectly hardy in all soils. Before planting dig deeply, and add plenty of well-decomposed manure. When the weather is dry, in summer, copious waterings will secure finer flower spikes, and after the first flowering, if the plants are cut down, fresh flower spikes will be produced, and the display thus considerably prolonged. Coal ashes strewn over the crowns in autumn will protect the plants from the depredations of slugs in winter and spring.

BARR'S BEDDING VIOLAS OR TUFTED PANSIES.

FOR FLOWER BEDS, BORDERS, EDGINGS, WINDOW BOXES, ETC.

These Tufted Pansies are among the most valuable and decorative of spring and summer bedding plants; they produce masses of bloom of bright attractive colours, and with a little attention in cutting back and the addition of fresh soil to root into, they will maintain a continual display from spring to autumn. A mulching of cocoa fibre in summer is good. Fuller descriptions will be found in our GENERAL PLANT CATALOGUE.

BARR'S BEAUTIFUL HARDY PERENNIAL PHLOXES.

SUMMER AND AUTUMN-PLOWERING.

The beauty and usefulness of these grand border plants give to them a deservedly first place amongst hardy plants. For cutting, their large trusses go a long way in floral decorations. In colour they range from pure white to richest crimson and purple, and from soft rose and salmon to bright coral-red, some having a delicate fragrance. These beautiful Perennial Phloxes form two sections—those which flower in June and July, which are comparatively dwarf in growth; and the taller growing Phloxes, which bloom in August and September. Thus, by planting an assortment from both sections, a display of these charming flowers is maintained from June to September. Perennial Phloxes succeed in almost any soil or situation, and are much benefited by a mulching of decomposed manure in spring, and in hot weather an occasional soaking of water is advisable.

EARLY-FLOWERING PERENNIAL PHLOXES (Suffruticosa Varieties).

These are all very free bloomers, with large trusses of bright coloured flowers in *June* and *July*. In height they range from 2 to $2\frac{1}{2}$ ft.

Barr and Son's Selections, 12 in 12 varieties, 6/ & 9/

LATE-FLOWERING PERENNIAL PHLOXES (Decussata Varieties).

These are among the most important of early autumn-flowering border plants, supplying a variety of light, bright, cheerful colours at a season when the prevailing tints of the garden are a little sombre. In growth they are stately and elegant, being 3 to 4 feet in height. The flowers are large, and produced in branching heads, the colours ranging from pure whites to beautiful shades of salmon, rose, and crimson, and from delicate lilac to deep purple. They are decorative during August and September. The new large-flowered varieties we offer are a great advancement on the older kinds, the flower heads being bolder and the individual blooms much larger.

25 in 25 New Large-flowered Varieties, 21/ & 30/; 12 in 12 New Large-flowered Varieties, 9/, 12/, & 18/25 in 25 Finest of the Older Varieties, 10/6 & 15/; 12 in 12 Finest of the Older Varieties, 6/

A full descriptive list of the above Phloxes sent on application.

BARR'S BEAUTIFUL HARDY PYRETHRUMS.

Plants always ready to send out, and may be planted out at any time.

The Pyrethrum in May and June occupies the same position as that held by the Chrysanthemum in September and October, therefore the name "Spring-flowering Chrysanthemum" is not inappropriately given to it. The flowers are large, elegantly formed, and vary in colour from snow-white to the richest crimson. The habit of the plant is graceful, the foliage elegant, and the flowers are produced in great profusion. Its hardiness is beyond all doubt, having stood uninjured, without the slightest protection, during the severe winters of 1850 and 1891. In herbaceous borders, shrubberies, and situations where a mass of colour is important in May and June, Pyrethrums are matchless. As cut flowers for vases and table decoration, the blossoms are of the greatest value, and last in water longer than almost any other flower.

In addition to the early summer display, the Pyrethrum, if cut back in *summer*, and encouraged to make vigorous growth, will again flower profusely in *autumn*.

Our Annual Exhibitions of these flowers at the R.H.S. Fortnightly Meetings, and at King Street, Covent Garden, attract much attention.

BARR'S HANDSOME PERENNIAL SUNFLOWERS & THEIR ALLIES.

Awarded a Silver Medal, Oct. 8th, 1892, at the Int. Hort. Exhibition, London.

It would be impossible to describe the grand effect produced by these late summer and autumn-flowering plants, grouped in shrubberies, or massed in flower borders, or used to fill large beds in grass, or to naturalize. They are all profuse bloomers, succeeding in any soil or situation, and where cut flowers are wanted for church decoration or table bouquets, the supply is almost unlimited. These Perennial Sunfiowers and Allies and the beautiful varieties of Ox-Eye Daisies (Chrysanthemums, p. 23) and the splendid varieties of Michaelmas Daisies (Asters, p. 23) are exceptionally valuable where large breaks of colour are wanted for late summer and autumn effect, or where cut flowers are in demand, no other classes of plant will be found so useful, and at the same time so accommodating as to soil and situation; they grow anywhere, and no amount of frost injures them.

La October, 1891, there was a great Conference on Perennial Sunflowers, Michaelmas Daisies, etc., at the Royal Horticultural Society's Gardens, Chiswick, where our collection formed a conspicuously striking feature. The names of the species and varieties of Perennial Sunflowers and their allies were verified by the Committee appointed by the R.H.S. to settle the nomenclature, and determine which were the best and most desirable varieties for garden culture. A list with descriptions, height, and time of flowering, free on application.

REDUCING THE LIST OF DAFFODILS WHICH APPEARED IN "YE NARCISSUS OR DAFFODIL."

The first Daffodil Conference, held April 1st, 1884, by the Royal Horticultural Society, elected a Daffodil Committee, who delegated the late Mr. Thomas Moore and our Mr. Peter Barr to draw up a list of the names of all Daffodils at the time in cultivation. This report was in due time presented, and the list appeared in all the gardening papers. On this followed a descriptive list of Daffodils with the names of the raisers who had originated new varieties during the present half of this century. This list appeared in the "Florist and Pomologist," and afterwards was appended to a brochure by F. W. B., entitled "Ye Narcissus or Daffodil," and intended as a permanent record, not only of modern Daffodils, but of all that had been known to exist from the days of Parkinson. Since 1884 we have considerably reduced the number of these modern Daffodils, and the following is a list of varieties we have discarded or are otherwise non-existent. We have appended the raisers' names as follows:—B. Backhouse, L. Leeds, Leich, Leichtlin.
